Professional Summary

Senior Technical Writer and Content Management professional with 19+ years of experience delivering clear, customer-focused technical documentation across the product lifecycle. Proven ability to **own documentation initiatives**, translate complex technical concepts into accessible content, and collaborate with **Product, Engineering, QA, and cross-functional teams** to deliver high-quality documentation that improves customer understanding and product adoption.

Strong editorial and content strategy background, with expertise in **content quality, governance, information architecture, technical editing, and digital content development**. Skilled at driving **content consistency, usability, and publishing efficiency** while aligning documentation with product and customer needs. Experienced in using **AI-assisted workflows** to enhance content quality, accelerate delivery, and improve productivity.

Experience

Technical Writer 2 | Hyland Software

November 2020 – August 2026

- Developed and maintained **customer-facing Module Reference Guides** covering key product information and workflows, including sections, such as Overview, Installation, Configuration, and Usage, across industries, such as Healthcare.
- Worked in an **Agile product development environment** aligning with **SDLC** and **DDLC**, collaborating with Product Owners, Developers, and Quality Analysts across development and release cycles to identify documentation requirements, track changes, and deliver documentation aligned with product releases.
- Created an **AI Agent in Microsoft Copilot Studio** to streamline the documentation development process by **analyzing JIRA stories and development tickets** to identify information relevant to documentation and generate initial drafts.
- Developed an **AI-assisted documentation workflow** in which the generated drafts were subsequently processed through a **Copilot Agent** functioning as an editorial and language reviewer, using the organization's Style Guide to identify and correct language, grammar, terminology, and style issues.
- **Reviewed and validated the AI-generated documentation** to identify factual, technical, or contextual inaccuracies before publishing.
- Used MadCap Flare to structure, format, and generate customer-facing documentation in PDF and online-help formats.
- **Edited UI messages** to improve grammar, clarity, consistency, and adherence to documentation and language standards.
- Applied technical-writing, editorial, and product knowledge to evaluate and refine AI-assisted documentation workflows, combining automation with human review to improve the efficiency and quality.
